## **The workshop / jobcards system.**

The workshop systems help files are being re-written at present. They will be posted on the web as soon as they are ready.

The system has standard debtors and invoicing module and stock module. The open invoice module is modified to cater from garage system and also for fuel sale accounts.

The jobcards system has several functions. When the job comes into the garage, a jobcard is created with vehicle details and faults etc. Then the job card is printed out and stuck on the vehicle. As the job progresses, the data is entered into the jobcard. Once the job is finished, it is shifted to finished jobs screen for final check. After the final check, the job is turned into a tax invoice and printed. This tax invoice is saved into history file. The jobcard number is also used as an order number to order parts for the vehicle.

Optional modules can be joined with the jobcards are :

WOF module. This module allows to keep the vehicle data at WOF and print out a reminder letter and reports.

Vehicle maintenance and service reminder module. This module keeps record of service and maintenance of fleet. The km or hours are entered into the system once a week to keep track of next service due.

Orders module. This module gives the facility to created orders, print and keep track of items received. It also comes with basic suppliers file and can be integrated with stock.

Please contact Shafid Khan for more information.
